All Diabetic Wounds Are Seen Within 24 Hours

Specialized Wound Healing is here...

Midlands Orthopaedics is proud to announce the expansion of our services to now include state-of-the-art wound care. South Carolina is the 3rd leading per capita state for diabetes; and foot ulcerations / infections are the #1 cause for hospital admissions for diabetic patients. The new ADVANCED WOUND CARE CENTER at Midlands Orthopaedics is here to help with healing, and preventing wounds and ulcers of all types of patients...including diabetics. The cost of diabetic foot ulceration reaches into the billions of dollars annually, and unfortunately a neglected wound could lead to amputation. 80,000 amputations are performed every year due diabetic complications. It is widely believed that 50% of those amputations are preventable with proper wound care. 70% of patients with an ulcer do not receive follow-up care...we are here to change that fact. Consult with our specialists at the ADVANCED WOUND CARE CENTER..."an ounce of prevention is worth a pound of cure."
